

# Kit Bell, Webster Seed Farm, Rocanville, Saskatchewan John Deere 9600 (2)

“We overhauled one of our two 9600 combines and installed a Sunnybrook concave, cylinder and back beater two years ago. Our second machine is being updated with a Generation II processor now. I told the guys at Sunnybrook we’re probably their best sales people. Our neighbor has three combines and had changed one over to Sunnybrook last year. The operators on their farm would foot race for the shed calling out, “I’ve got the Sunnybrook” The fact that slugging and plugging are just about eliminated saves on smoked drive belts at over \$280.00 a pop. Clean out ease is a real bonus for seed growers. Cleaner threshing with more grain in the tank with an even flow of material through the machine. And finally a back beater that works.”

Sunnybrook Generation II cylinder, concave and tine back beater  
Peas, Barley, Wheat, Flax, Oats, Canola  
2000/2001/2002  
Respectfully,

*Kit*
