

CR NEW HOLLAND CONCAVES AND EXTENSION GRATES HAVE A HEAVY-DUTY DESIGN, WITHOUT THE HEAVY LIFTING!

Sunnybrook Welding manufactures a concave system for New Hollands CR Series machines fitting both 17" rotor and 22" rotor models.

Their innovative concave systems produce results that save you time, money, and most importantly, saves your back from needless strain and pain.

### INNOVATIVE TECHNOLOGY

Sunnybrook Welding's concaves are designed to be modular making each component weigh far less than traditional concaves. Our innovative design makes changing out damaged parts easier and far less dangerous.

### CUSTOM COMPONENTS, HIGHER YIELDS, SMARTER HARVEST

Sunnybrook Welding's precision manufactured max thresh front segments, combined with our unique open designs at the back, produce a remarkably clean sample without the need to close the rotor concave clearances impacting the associated power draw. Less friction means less fuel used, giving you greater financial returns.

### BORON MAKES THE MAX THRESH INSERT STRONGER TO LAST LONGER

The max thresh helical bar inserts are boronized improving the quality, durability and extending the life of the insert. Listed as an incredibly tough 9.5 on the Mohs Scale of relative hardness, boron is the element that makes Pyrex so much stronger than regular glass.

### INSERTS ARE INSTALLED IN EACH FRAME ADDING AN ARRAY OF FEATURES:

- Reversibility adds extra life to the concave for more bang for your buck
- Replaceability at a fraction of the cost delivers huge savings
- Improved threshing and separating, for a higher quality, cleaner sample
- Additional stone protection with shear bolt mounts is sheer genius!
